# BISMICA COLORS

*Cosmetic Pearlescent Pigments*

by FarmaQuimia.

BISMICA COLORS are a uniquely bonded combination of pigments, bismuth oxychloride and muscovite mica.

Such pearlescent pigments provide clear intense color and subdued satiny luster in each crystalline particle.

Readily blended, dispersed, or compressed in cosmetic formulations, their main applications include:  
Pressed Powders, Cream Eye Shadows,  
Mineral Makeup, and every colored cosmetic formulation including lipsticks and eyeliners.

BISMICA COLORS avoid process-intensive milling by being easily blended into the final formulation. Consequently, superior skin adhesion, pearlescent brilliance, and a unique optical appearance are all simultaneously attained.

Name	Composition
BISMICA BROWN	BiOCl- Mica – Pigment
BISMICA RED	BiOCl- Mica – Pigment
BISMICA YELLOW	BiOCl- Mica – Pigment
BISMICA MAGENTA	BiOCl- Mica – Pigment
BISMICA BLACK	BiOCl- Mica – Pigment
BISMICA DORADO	BiOCl- Mica – Pigment
BISMICA DARK BLUE	BiOCl- Mica – Pigment
BISMICA MAUVE	BiOCl- Mica – Pigment
BISMICA AQUA	BiOCl- Mica – Pigment
BISMICA GREEN	BiOCl- Mica – Pigment
BISMICA PURPLE	BiOCl- Mica – Pigment
BISMICA VIOLET	BiOCl- Mica – Pigment
BISMICA LIGHT BLUE	BiOCl- Mica – Pigment
